

The Necklace

You can use ASCII to make a necklace if you switch between two different types or colors of beads. (They don't have to be black and white; they can be any two things you want!) You can use other types of bead to separate the letters. (Those are called **delimiters** in computer science.)

Here's an example necklace:

What do you want to write? Think about how much you're going to read and how many reading checkpoints you'll probably reach (reading checkpoints listed on the next page). Then you can plan out your secret message. Do you want to write your name? Your initials? Your favorite band? Your favorite hobby? See if you can decode our secret message below!
