

This snowflake craft can be done 2 ways. You can print out the snowflake below & carefully cut out the shape.

If that's too hard, cut 4 long strips (like in the picture on the left). Place 2 strips like an "X", then add & glue the last 2 strips like an X on top to look like a 8 point star.

The next steps are for either snowflake you choose. Cut or tear paper to place on the star. You can use white paper for your snowflake or use any color you like! Elmer's school glue is good for this craft for its pointy nozzle. Draw lines of glue on the snowflake strips. Place your cut out paper over the glue & press down to make sure the paper stays on the shape. Whenever it snows, think how easy it is to make snowflakes & make some!
