

The birdhouse 3D

Print out with black ink.

Fold in half down the center.

Cut along the bottom of the house,
underneath the bird seeds.

Cut each circle out individually.

Fold along the dotted line.

These are the bird's wings.

Cut off the excess paper along the top
and sides. Cut a short cut starting at the top of
the bird house & stop at the dotted line.

At the dotted lines fold down.

This makes the bird house roof.

Glue the bird's wing folded with the lines
showing outside to the lower belly of the bird.

The bottom tail feather is where the fold of the
wing should meet & be glued. See pictures.

Color before or after like my picture on the
bottom right side. Use a hole puncher at the top
where indicated. Tie a string through the hole
and hang to enjoy nature from inside
your home.
